## Heated seat and lumbar function

For more information visit  
[www.la-z-boy.co.uk](http://www.la-z-boy.co.uk)

**The heated element may be either just the seat or the seat and lumbar area, depending on the specific model of sofa range purchased.**

The heated seat and heated lumbar function are available on motion pieces only. Each motion seat is equipped with two heating pads, one in the seat cushion and another in the back cushion. The heating pads are measured at 30cmx40cm, providing optimal coverage and a comforting warmth.

The heating pads have some impressive features. They can reach a maximum temperature of 68°C, while ensuring the seat and back cushion surface stays at a comfortable 45°C. The pads heat up quickly, taking only 7 minutes to reach 40°C and 15 minutes to achieve a soothing 45°C.

# Safety and usage

---

To ensure safety and worry-free usage, the heating pads are programmed to automatically turn off after 60 minutes of use. Additionally, this innovative technology will shut off the heating pads when the temperature reaches 75°C, giving users peace of mind during extended periods of use.

Operating the heated seats and lumbar is extremely simple, thanks to a user-friendly button. By pressing this button, you can easily start the heating process. Once activated, an indicator light will turn on, signalling that the heating pads are warming up. Should you wish to take a break from the warmth, just press the button again, and the heating will stop, with the indicator light turning off accordingly. For further reference, you can refer to the images of the buttons below.
